METHODOLOGY

Echelon Insights conducted a survey on behalf of The Washington Free Beacon on attitudes towards antisemitism and Republican primary candidates. The survey was fielded online from June 5-9, 2026 in English among a sample of 1121 voters in the likely Republican primary electorate nationwide, using non-probability sampling. The sample was drawn from the Cint sample exchange based on demographic quota targets for Republican primary voters.

Measures taken to ensure data quality included measures to prevent duplicate responses, questions designed to disqualify inattentive respondents, and the removal of respondents from the data file who answered more than one-third of the questions they were asked in less than one-third of the median response time per question.

The sample was weighted to reflect demographic characteristics of the population of Republican primary voters nationwide based on a probabilistic model that incorporates data from the US Census Bureau's American Community Survey and Current Population Survey Voting and Registration Supplement. Weighting dimensions included gender, age, race/ethnicity, educational attainment, and region, as well as gender by age, and race by age.

Calculated the way it would be for a random sample and adjusted to incorporate the effect of weighting, the margin of sampling error is ± 3.3 percentage points.
